Practical Virology for Medical Students and Practitioners in Tropical Countries

D. Metselaar and D.J.H. Simpson

The importance of viral diseases tends to be underestimated amongst medical personnel in tropical countries: this book attempts to remedy the situation. Special attention is given to the epidemiological aspects of viral diseases and to the role vaccines can play in their prevention. Illustrated paperback £6.95

Urbanization and Cancer Mortality

Michael Greenberg

This book provides a detailed view of the geography of cancer with a clear message: increasing homogeneity. It is based on U.S. mortality data arranged by age, race and sex for five year periods from 1950 to 1975. The author's analysis of U.S. data is supported by a review of the literature on 52 other countries, including England and Wales, Canada, Poland and Norway. Illustrated £30
Monographs in Epidemiology and Biostatistics Volume 4

Epidemiology of Musculoskeletal Disorders

J.L. Kelsey

Musculoskeletal disorders are among the most common health problems in most parts of the world, yet their epidemiology has received relatively little attention. This book is the first full attempt to bring together and analyse critically the literature on the epidemiology of the major diseases, congenital malformations, and injuries of the musculoskeletal system. £25

The Economics of Health in Developing Countries

Edited by Kenneth Lee and Anne Mills

The purpose of this book is to offer a means by which economists, with direct knowledge and experience of working in developing countries, can illuminate the ways in which economic concepts and techniques can be, and are being, applied to health and health services. The aim is to indicate both the present scope of application of economic analysis, and the potential of economics in the future planning and management of the health sector. Illustrated £17.50
