Surveillance in Health and Disease

Edited by **W. J. Eylenbosch and N. D. Noah**

Surveillance is essential in health programmes to monitor the occurrence and spread of disease, and to assess the effectiveness of cures. This book stresses the need for surveillance, which is not obligatory in all European health services, and covers the features of surveillance systems and how they are used.

Epidemiology, Health, and Society

Selected Papers of Mervyn Susser

Mervyn W. Susser

This collection of papers addresses broad epidemiological concerns such as the logic of judgement about relations between presumed causes and effects, and the social context of the epidemiological studies and of health in general.

Cancer Risks and Prevention

Edited by **M. P. Vessey and J. A. Muir Gray**

A collection of papers to mark the retirement of Sir Richard Doll.

'This excellent book on cancer is timely . . . the information portrayed in this book is worth many volumes of literature dedicated to the diagnosis and treatment of disease.' *The Lancet*

UK Smoking Statistics

Nicholas Wald and others

Since the Tobacco Research Council stopped producing their annual statistics there has been no single comprehensive source of information on smoking in the UK. This book fills this gap, giving details of smoking habits, tobacco consumption, pricing, and tar, nicotine and carbon monoxide yields.
