Statistical Models in Epidemiology
David Clayton and Michael Hills

This self-contained account of the statistical basis of epidemiology has been written specifically for those with a basic training in biology, therefore no previous knowledge is assumed and the mathematics is deliberately kept at a manageable level. All statistical analysis of data is based on probability models and only by fully understanding the model can one fully understand the analysis. In showing how to use models in epidemiology the authors have chosen to emphasize the role of likelihood, an approach to statistics which is both simple and intuitively satisfying. More complex problems can then be tackled by natural extensions of the simple methods. Based on a highly successful course, this book explains the essential statistics for all epidemiologists.

Contents: I. Probability Models and Likelihood; Probability models; Conditional probability models; Likelihood; Consecutive follow-up intervals; Rates; Time; Competing risks and selection; The Gaussian probability model; Approximate likelihoods; Likelihood, probability, and confidence; Null hypotheses and p-values; Small studies; Likelihoods for the rate ratio; Confounding and standardization; Comparison of rates within strata; Case-control studies; Likelihoods for the odds ratio; Comparison of odds within strata; Individually matched case-control studies; Tests for trend; The size of investigations; II. Regression Models; Introduction to regression models; Poisson and logistic regression; Testing hypotheses; Models for dose-response; More about interaction; Choice and interpretation of models; Additivity and synergism; Conditional logistic regression; Cox's regression analysis; Time-varying explanatory variables; Three examples; Nested case-control studies; Gaussian regression models; Postscript; III. Appendices; A. Exponentials; B. Some basic calculus; C. Approximate profile likelihoods; D. Table of the Chi-squared distribution; Index

375 pages, line drawings and tables throughout, July 1993

Models for Repeated Measurements
J. K. Lindsey

Models for Repeated Measurements presents the general context of repeated measurements, introducing the three basic types of response variables: continuous (normal), categorical and count. The ways in which such repeated observations are interdependent, through heterogeneity and time dependence, are discussed and a framework for constructing suitable models is developed, with the introduction of the necessary concepts of multivariate distributions and stochastic processes. A large number of concrete examples, including the data tables, are presented to illustrate the models available. Finally, a very extensive bibliography of the repeated measurements literature is provided.

Contents: Introduction; Basic concepts; Fundamentals of modelling; Heterogeneous populations; Longitudinal studies; Overdispersion; Longitudinal discrete data; Frailty; Event histories; Appendices; A: Data tables; B: Programs used; Bibliography; Index

EPIDEMIOLOGIC REVIEWS
Volume 14
Edited by Haroutune K. Armenian, Leon Gordis, Jennifer L. Kelsey, Myron M. Levine, and Stephen B. Thacker

The American Journal of Epidemiology is pleased to announce the publication of the latest volume of its annual review, Epidemiologic Reviews. This review series, now in its 14th year, is published under the editorial management of the Journal and sponsored by the Society for Epidemiologic Research and the International Epidemiological Association. The contents for Epidemiologic Reviews Volume 14 are:

Eosinophilia-Myalgia Syndrome: Coming to Grips with a New Illness. Edwin M. Kilbourne
Epidemiology of Alzheimer's Disease. Monique M. B. Breteler, Jules J. Claus, Cornelia M. van Duyn, Lenore J. Launer, and Albert Hofman
Reproductive Effects of Caffeine: A Review and Theoretical Analysis. Larry Dlugosz and Michael B. Bracken
The Benefits and Risks of Mammographic Screening for Breast Cancer. Susan F. Hurley and John M. Kaldor
Benign Prostatic Hyperplasia: Antecedents and Natural History. Harry A. Guess
Measurement of Past Diet: Review of Previous and Proposed Methods. Christine M. Friedenreich, Nadia Slimani, and Elio Riboli
Epidemiology of Pertussis and Reactions to Pertussis Vaccine. Sally L. Hodder and Edward A. Mortimer

Epidemiologic Reviews Volume 14 is available for the price of $20.00 per copy. (Note: All subscriptions to the American Journal of Epidemiology include a copy of Epidemiologic Reviews.) Checks should be made payable to the American Journal of Epidemiology, with foreign checks made out in US dollars drawn on a US bank. Payment acceptable by MasterCard and VISA (include account no., signature, expiration date). Send payments to: American Journal of Epidemiology, P.O. Box 64655, Baltimore, MD 21264-4655, USA. *The Journal is published twice monthly; all subscriptions include the annual review volume: institutional, US $190.00, foreign $198.00; personal subscriptions through membership in the Society for Epidemiologic Research, US $80.00, foreign $85.00; full-time graduate students, US $55.00, foreign $60.00; other personal subscriptions, US $95.00, foreign $99.00. All subscriptions are on a calendar year basis, January to December. Note payment instructions given above.
Information for Contributors

The International Journal of Epidemiology is produced bi-monthly and publishes original work, reviews and Letters to the Editor in the fields of research and teaching in epidemiology.

All papers are published in English although submission of articles in other languages will not prejudice editorial consideration. The author will be responsible for translation into English if the article is accepted for publication.

Copyright of articles is held by the International Epidemiological Association except where copyright already rests with the body under whose auspices the work reported was carried out. Authors may use their own material elsewhere provided acknowledgement is made of the Journal as the original place of publication.

Articles are accepted for publication on condition that they are contributed solely to the International Journal of Epidemiology. The editors cannot enter into correspondence about papers considered unsuitable for publication and their decision will be final. Neither the editors nor the publishers accept responsibility for the views and statements of authors expressed in their contributions.

Authors of articles will be supplied with 50 free reprints.

Manuscripts

Papers should be submitted in triplicate to Professor POD Pharoah, Department of Public Health, University of Liverpool, PO Box 147, Liverpool L69 3BX, UK.

Details of the Journal format are given in a Leading Article in Volume 16 Number 1. Manuscripts should be prepared in the Vancouver Style (see eg Br Med J 1982; 284: 1766·76) and should be less than 3000 words. A summary of the findings should form part of the manuscript.

References should be in the order made in the text and numbered accordingly. These numbers should be inserted above the line on each occasion a reference is cited (confirmed by other studies). Numbered references should appear at the end of the article and should consist of the surnames and initials of all authors when six or less, when seven or more list first three and add et al, title of article, name of journal abbreviated according to Index Medicus style, year, volume, first and last page numbers, e.g. Bull Q, Doe J. Epidemiology and public health. Int J Epidemiol 1970; 5: 702-10.

For books, names and initials of all authors, the full title, place of publication, publisher, year of publication and page number should be given.

All measures should be reported in SI units followed, in text, by traditional units in parentheses. For general guidance of the International System of Units and some useful conversion factors, see 'The SI for the Health Professions' (WHO, 1977). There are two exceptions; blood pressure should be expressed in mm Hg and haemoglobin as g/dl.

Illustrations

Illustrations should be numbered, given suitable legends and marked lightly on the back with the author's name and the top edge indicated. Original drawings may be submitted although high quality glossy photographs are preferable. Illustrations and tables should be kept separate from the text.

Review of Books

Books and monographs will be reviewed as space permits and may be sent to the Editor.

Subscriptions

All dispatches post free (by airfreight to subscribers in USA and Canada or by air speeded post to subscribers in Japan, Australia, New Zealand and India). Orders may be placed with any bookseller or sent direct to: Journals Subscriptions Department, Oxford University Press, Walton Street, Oxford OX2 6DP, UK.

Membership

For information about Membership of the International Epidemiological Association please write to the Membership Secretary, Dr Arpo Aromaa, Research Institute for Social Security, Social Insurance Institution. POB 920, 00101 Helsinki 10, Finland.

Changing your address?

Please send your new address direct to International Journal of Epidemiology, Journals Subscriptions Department, Oxford University Press, Walton Street, Oxford OX2 6DP, together with the old addressed label from this issue.

Contributors are advised to consult the detailed instructions for the preparation of manuscripts which are available from the Editor on request.
continued from front cover

677 Maternal Recall of Symptoms Associated with Childhood Deaths in Rural East Africa
   R W Snow, I Basto de Azevedo, D Forster, S Mwankuyse, G Bomu, G Kassiga, C Nyamawi, T Teuscher and K Marsh

684 Breastfeeding and Other Reproductive Factors and the Risk of Hip Fractures in Elderly Women
   Robert G Cumming and Robin J Klineberg

692 Validity of Contraceptive Histories in a Rural Community in Kenya
   Baker N Maggwa, Japheth K Mati, Susan Mbuga and David J Hunter

698 Water and Non-Water-Related Risk Factors for Gastroenteritis among Bathers Exposed to Sewage-Contaminated Marine Waters
   J M Fleisher, F Jones, D Kay, R Stanwell-Smith, M Wyer and R Morano

709 Clustering of Xerophthalmia within Households and Villages
   Joanne Katz, Scott L Zeger, Keith P West Jr, James M Tielsch and Alfred Sommer

716 HTLV-I/II Infections in Spain
   V Soriano, E Calderón, B Esparza, G Cilla, A Aguilera, M Gutiérrez, J Tor, E Pujol, F Merino, E Pérez-Trallero, M Leal and J González-Lahoz from the HTLV I/II Spanish Study Group

720 Ethnic and Gender Differences in the Prevalence of Anti-Cytomegalovirus Antibodies among Young Adults in Israel
   Manfred S Green, Dani Cohen, Raphael Slepon, Guy Robin and Michael Wiener

724 The Design and Analysis of Cholera Vaccine Trials: Recent Lessons from Bangladesh

731 The Dot Map as an Epidemiological Tool: A Case Study of Schistosoma mansoni Infection in an Urban Setting
   Mauricio L Barreto

742 Estimation of Vaccine Effectiveness Using the Screening Method
   C P Farrington

Short Article

747 Validation of Self-Report of Literacy among Periurban Women in Bolivia
   Deborah E Bender and Margaret F McCann
